AI / ML Engineer | Data Engineering | Applied GenAI & Automation

PROFESSIONAL SUMMARY

AI/ML and data engineer with an MS in Data Science who builds production GenAI systems and automated data pipelines that replace manual, spreadsheet-driven work with governed, source-verified tooling. Designs and ships LLM-powered agents, RAG-style evidence pipelines, and cloud analytics platforms on Oracle Cloud Infrastructure that cut reporting cycles from days to hours and give teams trusted, auditable data instead of manual reconciliation.

EXPERIENCE

Senior AI & Data Engineer (Global Improvement) — Oracle *Jan 2021 – Present | Austin, TX*

- Designed and shipped LLM-powered automation workflows (evolved from Custom GPT prototypes into reusable, connector-enabled agent skills) that pull verified evidence from Slack, Jira, and Confluence to auto-generate postmortems, executive summaries, and incident triage reports — cutting manual investigation and write-up time for high-impact incidents.
- Built a human-in-the-loop review layer with explicit approval gates and audit trails for GenAI-generated incident and executive outputs, plus a governance workflow for tracking model deprecations, availability, and replacement across the AI/ML lifecycle.
- Re-architected a manual, spreadsheet/macro-driven monthly reporting process into a Python-owned CLI/GUI platform, cutting the reporting cycle from 3–5 days to about 3 hours.
- Built runtime-configurable Python/SQL pipelines that automate data ingestion from Jira and internal service-event systems, compute service-availability metrics, and generate versioned Excel and CSV/JSON reporting datasets.
- Deployed a secure analytics application on Oracle Cloud Infrastructure (Autonomous Database, Oracle APEX) with mTLS authentication, automated data feeds, immutable historical snapshots, and live operator dashboards for uptime, readiness, and gap analysis.
- Built automated reconciliation and audit logic across five integration and data source systems, separating true data-quality blockers from routine review items before executive-level reporting — sustaining 100% on-time monthly delivery.
- Support large-scale, cross-region incident and event response through Python automation, SQL analysis, and Agile delivery, partnering across SRE, Data Science, and Schema teams.

Government Financial Data Analyst — Lockheed Martin — Aeronautics *May 2019 – Jan 2021 | Marietta, GA*

- Led analytics initiatives for Aeronautics Sustainment Operations, using BI and data visualization to improve financial and operational decision-making.
- Delivered BI training programs that modernized financial workflows and drove team-wide adoption of new reporting tools.
- Drove process integration and cross-functional improvements supporting DCS, USG, and FMS customer operations.

Business Systems Analyst — BAE Systems, Inc. *Jun 2018 – Dec 2018 | Austin, TX*

- Performed security and vulnerability assessments across 200+ systems, supporting DFARS compliance and risk visibility.
- Automated onboarding and hardware-distribution reporting by consolidating disparate data sources into repeatable workflows.

SELECTED PROJECTS

- **GenAI Model Lifecycle Governance —** Workflow for tracking model deprecation notices, availability changes, and downstream-consumer impact across an enterprise GenAI stack.
- **Eshie — AI Legal-Ops Assistant (Esh Law Group) —** Full-stack GenAI assistant (Claude API, FastAPI, Postgres, React/Vite, MCP) automating paralegal workflows: Zapier/CASEpeer + Dropbox case intake, Google OAuth with Gmail/Calendar tool-calling for a personalized morning brief, and an automated Microsoft Teams daily brief (Adaptive Card via Power Automate) — plus a Bot Framework Q&A bot for ad-hoc case questions, built and pending activation; deployed on Render and Vercel.
- **Job Pal — AI Job Search Automation —** Agentic job search pipeline (Python, Claude Sonnet, XGBoost, Supabase, Streamlit): scrapes 4 tech sources plus an academic vertical in parallel, scores listings with a 3-pass pipeline — heuristic filter → XGBoost classifier → Claude Sonnet 1–10 — and generates resume-grounded cover letters for strong matches in a multi-user Streamlit dashboard.

SKILLS

- **AI / ML Engineering:** LLM agent design, GenAI workflow automation, RAG concepts, prompt/skill design, human-in-the-loop review systems, model-lifecycle governance, MCP, Oracle Cloud Generative AI, Oracle Cloud Data Science.
- **Data Engineering:** Python, SQL, Pandas, PySpark, ETL/ELT pipeline design, data-quality validation, reconciliation logic, CLI/GUI tooling, CSV/JSON/XLSX automation.
- **Cloud & Platforms:** Oracle Cloud Infrastructure, Autonomous Database Serverless, Oracle APEX, Oracle Analytics Cloud, NetSuite, Supabase, Google BigQuery.
- **Analytics & BI:** Power BI, Tableau, Excel/XLSX automation, service-reliability and availability reporting, customer-impact analysis.
- **Delivery:** Agile, Scrum, technical program delivery, incident response and RCA support.

CERTIFICATIONS

OCI Data Science Professional (2026) · OCI Generative AI Professional (2025) · OCI AI Foundations Associate (2025) · OCI Data Management Foundations Associate (2024) · OCI Foundations Associate (2024) · PSPO II (2023) · PSPO I (2023) · PSM II (2023) · PSM I (2023) · EXIN AI Essentials (2023) · EXIN Cloud Computing Foundations (2022) · ITIL Foundations (2022)

AWARDS & LEADERSHIP

- Lockheed Martin NextGen Award — Reshaping Our Financial Operations (2020); Evolving Our Culture (2019).
- Lockheed Martin Leadership Association — VP of Programs.
- NSBE — President/Chair, Lockheed Martin Marietta Enterprise.
